DETAILED ACTION***Allowable Subject Matter***

The following is an examiner's statement of reasons for allowance: The prior art fails to disclose an active matrix display and method for obtaining threshold voltage compensation therefor having, inter alia, a storage capacitor associated with each pixel, wherein, during a time period for establishment of a threshold voltage on the storage capacitor for a first transistor, a voltage equal to the sum of the threshold voltage and a voltage for compensating for turnoff of a second transistor is established on the storage capacitor (claims 1 and 18) or a storage capacitor, wherein, during a time period for establishment of a threshold voltage on the storage capacitor for a first transistor of the at least three transistors, a voltage for compensating for turnoff of a second transistor of the at least three transistors on the storage capacitor is established (claim 36) or a voltage equal to the sum of the threshold voltage and a voltage for compensating for turnoff of a second transistor of the at least three transistors is established on the storage capacitor (claims 35 and 37). The remaining claims 2-17 and 19-34 are allowed by virtue of their dependencies on claims 1 and 18, respectively. Hence, the examiner has allowed claims 1 through 37.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Dawson et al., Patent No. 6,348,906 ; Knapp et al., Patent No. 6,359,605.

None of the above patents discloses the threshold voltage compensation on the storage capacitor as recited.
